INTRODUCTION

The British Columbia Economic Accounts presented in this publication provide measures of production and consumption in different sectors of the provincial economy and in the economy as a whole. The Accounts were prepared by the Central Statistics Bureau in accordance with internationally accepted principles of economic accounting developed by the United Nations and adopted by Statistics Canada as part of the Canadian System of National Accounts. A description of the concepts, sources and methods employed for the production of the Accounts is available upon request. The collaboration and assistance of Statistics Canada specialists in the preparation of these Accounts is gratefully acknowledged.

NEW FEATURES

The following developments have been incorporated in the current edition of the Accounts:

(1) Convergence with Statistics Canada Annual Current Dollar Data

During the past few years, as a result of continuous methodological improvements by both the Central Statistics Bureau and Statistics Canada, as well as extensive liaison directly and through the Federal-Provincial Committee on Provincial Economic Accounts, the current dollar Consolidated Income and Expenditure Accounts in this publication have become more and more similar to the data

reported in the Statistics Canada publication Provincial Economic Accounts (Catalogue No. 13-213). The average difference in total GDP from the two sources has been less than half a percent over 18 years. In this year's publication, there is full convergence in terms of annual current dollar Consolidated Income and Expenditure data with the corresponding data from Statistics Canada.

Statistics Canada's publication contains only the Consolidated Income and Expenditure Accounts in current dollars. The present publication is considerably more comprehensive in that it also contains annual GDP by Industry Accounts in current and constant dollars and quarterly Income, Expenditure and Industry Accounts, which are not available from Statistics Canada.

(2) Disaggregation of Services Industry

The Community, Business and Personal Services Industry has been disaggregated into:

(a) Commercial Services
    (i) Food and Accommodation
    (ii) Services to Business Management
    (iii) Other Commercial Services

(b) Non-Commercial Services
    (i) Education and Related Services
    (ii) Health and Welfare & Related Services
    (iii) Other Non-Commercial Services

The components of the Income Account for each sub-industry were obtained either directly from Statistics Canada or by interpolation from a total furnished by Statistics Canada. The quarterly pattern was based on the monthly wage and salary patterns for each sub-industry. Statistics Canada's Real Domestic Product by Province and Industry (Catalogue No. 61-202) was the source of some B.C.-specific deflators

for the sub-industries; in others the Canada deflator adjusted by relative B.C. to Canada wage rates was used. The results can be found in Tables 8 and 14 in current dollars and Tables 17 and 18 in constant dollars.

(3) Disaggregation of Exports

The Consolidated Expenditure Account Item "Exports" has been disaggregated into:

(a) B.C. Merchandise Exports to the Rest of the World (ROW) - derived from Ministry of Industry and Small Business Development estimates of exports of B.C. origin through customs ports, and deflated using specific B.C. deflators for major export commodities.

(b) B.C. Merchandise Exports to the Rest of Canada (ROC) - derived from Statistics Canada's 1967, 1974 and 1979 Surveys of Destination of Shipments of Manufacturers (Cat. No 31-522) and deflated using B.C. or Canadian Industry Selling Price Indexes.

The results may be found in Tables 1 and 13 for current dollar exports and in Tables 15 and 16 for constant dollar exports.

(4) Adjustment in Real GDP by Industry Growth Rates

Theoretically the effects of indirect taxes less subsidies are removed by the deflation process, so that real GDE at market prices and real GDP at factor cost by industry should grow at the same rate. However, it frequently occurs that, owing to the imperfections of the deflation process, the real rates of growth are different. To correct for this

discrepancy, an unallocated residual is included in the total GDP at factor cost by industry (in constant dollars) to ensure consistency with GDE at market prices (in constant dollars). The adjustment is made in the industry account (Tables 17 and 18) for all years.
